

COUGH* – A vital reflex, but also a typical symptom of a common cold

Cough is a vital reflex which helps to clean the irritated airways of foreign particles (microbes, dirt, pathogens). Most often, a cough will occur as a reflex reaction to an obstruction such as mucus in the throat. As a typical symptom of a common cold, cough should be properly treated.

Cough* usually goes through different phases: First there is a dry, irritating cough. After 1-2 days the cough gets productive with the secretion of mucus. At the end a dry cough (residual cough) remains over a few days – but independent which cough, it is always annoying and unpleasant.

1. Irritated throat & cough
1-2 days
2. Dry cough
3-4 days
3. Productive chesty cough
3-4 days

TREATMENT

Two proven **herbal active ingredients** achieve remarkable results, because they complement one another perfectly in their effect: **thyme and marshmallow.**

Due to the pharmacological properties of thyme and marshmallow the BRONCHOSTOP® cough syrups and BRONCHOSTOP® pastilles act during all stages of cough*, whether it is dry cough, productive cough, irritated throat or obstructive mucus.

See for yourself and test BRONCHOSTOP®, Austria's number 1**.
